

**Abnormal Findings:** Abnormal photoreceptors (MP:0003728) and subretinal RPE cells (MP:0005549).

## EYE Phenotype

### Cornea:

**6/6.** Normal corneal epithelium, stroma, and endothelium.

### Anterior chamber:

**6/6.** The anterior chamber was of normal depth without cells, and the angle appeared open.

### Iris:

**6/6.** The iris showed normal pigmentation without rubeosis or pupillary membranes.

**Lens:**

**6/6.** No cataract was observed.

**Ciliary body:**

**6/6.** Normal stroma, pigmented and nonpigmented layers were present along with cilia.

**Vitreous:**

**6/6.** No abnormal opacities or cells.

**Retina:**

**3/6.** There is thinning and degeneration of the photoreceptor layers. The retinal ganglion cell layer appears normal.

**Retinal pigment epithelium and Choroid:**

**3/6.** There are subretinal RPE cells. Normal pigmentation. Bruch's membrane is intact. No neovascular membranes were noted.

**Optic Nerve:**

**6/6.** The nerve is normal.

**Methods.** 6 eyes from 3 male mice were enucleated by blunt dissection and fixed. Pupil-optic nerve sections were processed with hematoxylin and eosin, and standard images were captured under light microscopy for review.
