Gene: Ccdc104

Sanger Colony: MBUU

Abnormal Findings: Abnormal retina (MP:0003728) and RPE (MP:0005103).

EYE Phenotype

Cornea:

6/6. Normal corneal epithelium, stroma, and endothelium.

Anterior chamber:

6/6. The anterior chamber was of normal depth without cells, and the angle appeared open.

6/6. The iris showed normal pigmentation without rubeosis or pupillary membranes.

Gene: Ccdc104

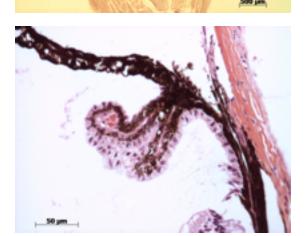

Genotype -/-

Sanger Colony: MBUU

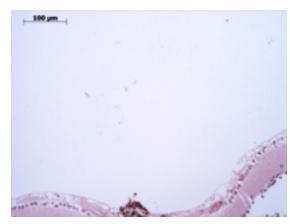

Lens:

6/6. No cataract was observed.

Ciliary body:

6/6. Normal stroma, pigmented and nonpigmented layers were present along with cilia.

Vitreous:

6/6. No abnormal opacities or cells.

Gene: Ccdc104

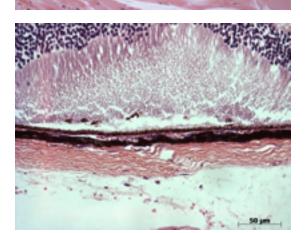

Genotype -/-

Sanger Colony: MBUU

100 µm

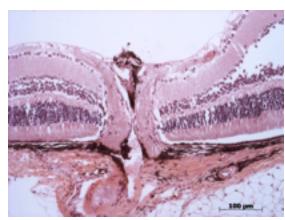

Retina:

6/6. The retinal ganglion, inner nuclear are normal. The photoreceptor layer shows thinning and disorganization.

Retinal pigment epithelium and Choroid:

3/6. There are foci of RPE cells beneath the retina. Normal pigmentation. Bruch's membrane is intact. No neovascular membranes were noted.

Optic Nerve:

6/6. The nerve is normal.

Methods. 6 eyes from 3 male mice were enucleated by blunt dissection and fixed. Pupil-optic nerve sections were processed with hematoxylin and eosin, and standard images were captured under light microscopy for review.
