## Principle Investigator: Dr. Jacqui White

Institute: Wellcome Trust Sanger Institute  
Address: Attn: Linda Read Wellcome Trust  
Genome Campus Hinxton Cambridge CB10  
1SA, UK

ReportID: Report Date: March 18, 2014  
Pathologist: Dr. H. Adissu

## Mouse Genetics Project

Wellcome Trust Sanger  
Institute  
Wellcome Trust Genome  
Campus  
Hinxton, Cambridge  
CB10 1SA

CMHD LabID: N13-1266

## Relevant History:

Phenotype:

None (no hit)

## AnimalID: M01338214 (Male)

### Histopathology Findings:

#### mesenteric lymph node (MA:0002829)

##### Histopath Description:

The mesenteric lymph node is markedly enlarged (greater than four-fold). The medulla is expanded by chords and sheets of lymphocytes. There are multiple germinal centers.

##### Morphological Diagnosis:

**Distribution:** Diffuse; **Severity:** extreme; **MPATH Diagnosis:** hyperplasia MPATH:134; **MPATH Process Term:** hyperplasia MPATH:134

##### Definitive Diagnosis:

Lymphoid hyperplasia with medullary plasmacytosis.

##### Histopathology Comments:

The changes in the mesenteric lymph node are suggestive of draining of a regional inflammatory process. However, such a process was not observed in the tissues examined.

## Organ/Tissue Analyzed:

Histopathology examination included the following organs and tissues: brain, trigeminal ganglion, eyes, salivary glands, trachea, lungs, heart, thymus, thyroid gland, parathyroid gland, exocrine and endocrine pancreas, oesophagus, stomach, small intestine, large intestine, liver, gall bladder, spleen, kidneys, adrenal gland, lymph nodes, spinal cord, bone marrow, sternum, femur and tibia with associated skeletal muscles, brown fat, pinna, skin, testis, epididymis, seminal vesicle, and prostate.

## AnimalID: M01338213 (Male)

### Histopathology Findings:

#### sternum (MA:0001331)

##### Histopath Description:

There is a sternal dislocation between the 4th and 5th sternal bodies. This is encased by a large nodular cartilaginous proliferation that extends to the outer aspect of the body wall and into the thoracic cavity (reactive reparative chondroid hyperplasia)

##### Morphological Diagnosis:

**Duration:** chronic; **Distribution:** focally extensive; **MPATH Process Term:** degenerative change MPATH:14

##### Definitive Diagnosis:

Sternal dislocation and reactive and reparative chondroid hyperplasia ('calus')

##### Histopathology Comments:

The cause of this lesion is not certain.

**eye (MA:0000261)****Histopath Description:**

small eye (half normal size)

**Morphological Diagnosis:**

**Severity:** severe; **MPATH Process Term:** hypoplasia MPATH:133

**Definitive Diagnosis:**

Microphthalmia

**Histopathology Comments:**

incidental

**Organ/Tissue Analyzed:**

Histopathology examination included the following organs and tissues: brain, trigeminal ganglion, eyes, salivary glands, trachea, lungs, heart, thymus, thyroid gland, parathyroid gland, exocrine and endocrine pancreas, oesophagus, stomach, small intestine, large intestine, liver, gall bladder, spleen, kidneys, adrenal gland, lymph nodes, spinal cord, bone marrow, sternum, femur and tibia with associated skeletal muscles, brown fat, pinna, skin, testis, epididymis, seminal vesicle, and prostate.

---

**AnimalID: M01366460 (Female)****Organ/Tissue Analyzed:**

Histopathology examination included the following organs and tissues: brain, trigeminal ganglion, eyes, salivary glands, trachea, lungs, heart, thymus, thyroid gland, parathyroid gland, exocrine and endocrine pancreas, oesophagus, stomach, small intestine, large intestine, liver, gall bladder, spleen, kidneys, adrenal gland, lymph nodes, spinal cord, bone marrow, sternum, femur and tibia with associated skeletal muscles, brown fat, pinna, skin, uterus, oviduct, and ovary, and mammary gland.

---

**AnimalID: M01366459 (Female)****Histopathology Findings:****eye (MA:0000261)****Histopath Description:**

focal retinal fold

**Morphological Diagnosis:**

**Distribution:** focal; **Severity:** mild; **MPATH Process Term:** developmental dysplasia MPATH:64

**Definitive Diagnosis:**

Focal retinal fold/dysplasia

**brain (MA:0000168)****Histopath Description:**

There is marked dilation of the lateral ventricles

**Morphological Diagnosis:**

**Distribution:** diffuse; **Severity:** severe; **MPATH Process Term:** degenerative change MPATH:14

**Definitive Diagnosis:**

Dilation of the brain ventricles

**Histopathology Comments:**

Mild to moderate dilation of the ventricles is a background condition in mice of C57BL/6N background

**thymus (MA:0000142)****Histopath Description:**

There is a 50 um diameter epithelial cyst.

**Morphological Diagnosis:**

**Distribution:** multifocal; **MPATH Diagnosis:** cyst MPATH:62; **MPATH Process Term:** developmental and structural abnormality MPATH:55

**Definitive Diagnosis:**

Epithelial cyst

**Histopathology Comments:**

This is a developmental abnormality commonly seen in mice.

**Organ/Tissue Analyzed:**

Histopathology examination included the following organs and tissues: brain, trigeminal ganglion, eyes, salivary glands, trachea, lungs, heart, thymus, thyroid gland, parathyroid gland, exocrine and endocrine pancreas, oesophagus, stomach, small intestine, large intestine, liver, gall bladder, spleen, kidneys, adrenal gland, lymph nodes, spinal cord, bone marrow, sternum, femur and tibia with associated skeletal muscles, brown fat, pinna, skin, uterus, oviduct, and ovary, and mammary gland.

**Report Summary and Recommendation:**

Lesions in this line are incidental or attributable to strain background.

Line summary: none
