Genotyping by end-point PCR

PCRs primer pairs and expected size bands

Assay Type	Assay	Forward Primer	Reverse Primer	Expected Size Band (bp)
Standard PCR	Screening*	Herc1_1696_SNP_WT_F	Herc1_1696_SNP_R	281
Standard PCR	Wildtype	Herc1_1696_SNP_WT_F2	Herc1_T1696A_R	161
Standard PCR	Mutant	Herc1_1696_SNP_Mut_F	Herc1_T1696A_R	162

*The screening PCR flanks the SNP region and can be used for sequence verification of the allele. The PCR will not distinguish wild type from mutant mice, however, as a product will be amplified in all cases.

We recommend that mice are sequence-verified with the screening primers to confirm the genotyping qPCR results when establishing the colony, in case of any cross-talk between the assays.
