

Abnormal Findings: Thin photoreceptor cell layer [MP0003728].

EYE Phenotype

Cornea:

6/6. Normal corneal epithelium, stroma, and endothelium.

Anterior chamber:

6/6. The anterior chamber was of normal depth without cells, and the angle appeared open.

Iris:

6/6. The iris showed normal pigmentation without rubeosis or pupillary membranes.

Gene: **Sdhc**

Genotype **+/-**

Sanger Colony: MAQG

Lens:

6/6. No cataract was observed.

Ciliary body:

6/6. Normal stroma, pigmented and nonpigmented layers were present along with cilia.

Vitreous:

6/6. No abnormal opacities or cells.

Retina:

2/6. The photoreceptor layer is thin. The retinal ganglion and inner nuclear layers appear normal.

Retinal pigment epithelium and Choroid:

6/6. Normal pigmentation. Bruch's membrane is intact. No neovascular membranes were noted.

Optic Nerve:

6/6. The nerve is normal.

Methods. 6 eyes from 3 male mice were enucleated by blunt dissection and fixed. Pupil-optic nerve sections were processed with hematoxylin and eosin, and standard images were captured under light microscopy for review.
