

Rhot2 (MCSF; EPD0389_5_A05)

Allele: *Rhot2*^{tm1(KOMP)Wtsi}

Embryonic stem cell targeted: JM8A3.N1

Embryonic stem cell origin: C57BL/6N

Background used for Germ Line Transmission: C57BL/6N Taconic USA

Subsequent backcross background: Inter cross from within the Colony.

Genetic background: C57BL/6N Taconic USA; C57BL/6N

Coat Colour Information:

Agouti and Non-Agouti (Black)

Breeding Performance and Lifespan:

- Generally heterozygous mice from this colony conform to normal expectations of the background strain.
- Homozygous Viable.

Bedding:

Aspen Chip derived from a Baltic supply – Supplier B&K Universal

Diet:

Autoclavable Mouse Breeder Diet 5021 – A controlled constant-nutrient diet formulated to compensate for nutrient losses that occur during steam sterilization. Supplier Lab Diet www.labdiet.com

Husbandry:

Cleaning frequency is based against cage numbers. Base changing is performed in a HEPA filtered change station which remains positive to the room environment. Gloved hands are disinfected between each cage. Diet is fed ad-libertum.

Housing System:

Individual Ventilated Cages maintained at positive pressure to the room with an average of 60 HEPA filtered air changes per hour.

This technical data sheet and information ("Datasheet") is supplied by Genome Research Limited ("GRL").

Although reasonable care is taken in the preparation of this Datasheet, GRL gives no warranties express or implied for any use of the Datasheet or for the accuracy of the Datasheet. GRL assumes no responsibility or liability for any decisions based upon the Datasheet. Without limiting the foregoing the Datasheet was prepared for mice supplied directly from GRL and where copies of this Datasheet are available from third party repositories or distribution centres ("Third Parties") GRL shall not be liable for any inconsistency between the mouse strain supplied by the Third Party and the Datasheet howsoever arising.

Further Information

As the mutant mouse strains generated by the Sanger MGP pass through the Sanger MGP primary phenotypic characterisation studies the information generated may be viewed through the Sanger Mouse Portal (www.sanger.ac.uk/mouseportal) where a gene of interest may be searched for. A Heat Map of phenotyping by assay is also available to view. Information regarding homozygous lethality and fertility may also be sourced here if determined.

Early notification on phenotyping data may be received by subscribing to the MGP-Early-Phenotyping-Alert.

Phenotype enquiries may be made through the contact MGPEnquiries@sanger.ac.uk.

A further source of phenotype information is the Europhenome Mouse Phenotyping Resource (www.europhenome.org)

Information regarding availability of knockout mouse resources may be queried at the International Knockout Mouse Consortium (IKMC; www.knockoutmouse.org).

Information relating to the knockout programmes may be found at the IKMC Knowledgebase, currently in development (www.knockoutmouse.org/content/ikmc-prototypes).

Information about targeting strategies may also be found at the IKMC website (www.knockoutmouse.org/about/targeting-strategies).
